Description of the All Day (6-8 hour)Module 100 for Authorization:

Trauma-Responsive and Resilience-Building Practices for Educators provides a foundational overview on the neurobiology of trauma, the impact of toxic stress on a child and adult and introduces the science of resilience and neuroplasticity. Participants will walk away understanding the difference between a challenging behavior and trauma trigger. The training will guide educators working with children to understand trauma as well as its impact on young children’s brains, behavior, learning, and development. The training introduces a range of trauma-responsive and resilience building practices they can use in their education programs to create strength-based environments that support children’s health, healing, and resiliency.
